

CITY OF WALTHAM DRIVEWAY PAVING PERMIT APPLICATION

All residential and non-residential property owners are required to apply for a permit when paving driveways and parking lots. Residential and non-residential projects replacing existing impervious surface, parking lots, or driveways and the pavement is only partially removed (mill and overlay) does not require a separate I/I Utility Permit, provided no additional new impervious surface is added and current impervious surface meets zoning and ordinance regulations. Residential and non-residential projects replacing existing impervious surface where pavement is fully removed will require drainage and a separate I/I Utility Permit. **An exception for existing single-family owner-occupied residential paving projects** removing existing impervious surfaces or driveways does not require drainage, provided no additional new impervious surface is added and current impervious surface meets zoning regulations. A City Inspector will confirm the size of existing impervious surface before and after the work. Please submit a plan or sketch showing the existing pavement and any previously unpaved surfaces that will be paved. If adding 150 square feet or more of pavement an I & I/Utility permit is required.
