

# WALTHAM HIGH SCHOOL BUILDING PROJECT

## COMMUNITY UPDATE APRIL 2019

The Waltham High School project team would like to share the following updates with the community regarding the early site package and other evaluations of the 554 Lexington Street property. We are happy to report that the activities listed below will result in

**MINIMAL NOISE AND DISRUPTION**  
to the Waltham community.

### GEOTECHNICAL INVESTIGATION:

There will be no blasting as part of this activity.

#### Field Mapping:

Field mapping will start the beginning of the week of April 8<sup>th</sup> and is expected to last 2-3 days.

#### Test Pits:

This activity will occur the weeks of April 15<sup>th</sup> and April 22<sup>nd</sup>. It will take 10 days to complete, including stormwater infiltration testing, for which final dates have not yet been determined, but will occur during the program.

#### Borings:

Borings will take place the week of April 22<sup>nd</sup>, and will take 14 days to complete.

#### Geophysical:

This activity will occur the week of April 22<sup>nd</sup>, and will require 7 days to complete.

#### Radon Testing:

Radon testing will most likely take place the week of April 15<sup>th</sup>.

### WETLANDS:

Additional flagging is complete - additional flags will be located by the survey. ANRAD filling preparation will occur in the office. Wildlife Habitat Evaluation will occur following ANRAD.

### TOPOGRAPHICAL SURVEY:

The survey will start the week of April 15<sup>th</sup> and continue through April 30<sup>th</sup> as needed. Survey will occur on-site and along Lexington Street north and southbound of the access drive to 554.

### TRAFFIC STUDY AND SIGNAL DESIGN:

In-office investigation work will commence immediately. It is unlikely that this activity will require any on-site presence since existing conditions are already documented, and additional survey will provide any missing information.

### GEO-ENVIRONMENTAL INVESTIGATION:

This activity will consist of underground storage tank exploration, and will take place with the geotechnical test pits previously listed.

#### Soil Analysis and Testing:

This activity will also occur with the geotechnical test pits previously listed.

### HAZARDOUS MATERIAL TESTING:

This will consist of the sampling of materials for lab analysis, and will most likely take place the week of April 15<sup>th</sup>.
